SUMMARY

Software engineer with hands-on experience building AI-powered systems — LLM pipelines, IoT platforms, and full-stack apps. Led engineering teams and mentored students at Stanford's Code in Place. Comfortable across the stack, from ML inference to production APIs.

EXPERIENCE

Freelance Full Stack Developer

Dec 2025 — Feb 2026

Independent

Indonesia

- Continued development of an existing Laravel app — a nursing workload calculator for hospitals
- Identified growing tech debt as requirements scaled to multi-hospital support; reworked the database schema from scratch
- Migrated the admin panel from Bootstrap to Filament for a more maintainable and efficient setup

Freelance Full Stack Developer

Oct 2025 — Mar 2026

Sekolah Alam Indonesia

Indonesia

- Built a multi-page school profile website using Next.js 15 and Sanity CMS for content management
- Implemented scroll-driven parallax animations with Framer Motion and custom spring physics hooks
- Integrated Lenis smooth scroll with custom easing and a manual animation frame loop
- Collaborated with a designer to translate Figma designs into pixel-accurate, responsive components
- Stack: Next.js, React, TailwindCSS, Sanity.io, Lenis, Framer Motion

Asah Capstone Leader

Oct 2025 — Dec 2025

Dicoding Indonesia

Remote

- Led a cross-functional team of 5 engineers (ML, Backend, Frontend) delivering a predictive maintenance system within 3 months
- Established Agile workflows using Linear and weekly checkpoints, delivering all milestones on schedule
- Coordinated integration of ML models into production-ready applications, enabling end-to-end AI feature delivery

Section Leader

Apr 2025 — Jun 2025

Code in Place, Stanford University

Remote

- Mentored 10+ students weekly in Python fundamentals, improving assessment scores by 40%
- Designed lesson plans and collaborative projects, increasing engagement and completion rates

PROJECTS

Sentry — AI Predictive Maintenance System

github.com/Asah-Team/repositories

- Built an AI-powered pipeline using LSTM and FastAPI for real-time Remaining Useful Life (RUL) prediction for industrial equipment
- Designed automated workflows processing sensor data every 30 minutes using FastCron
- Implemented intelligent filtering reducing unnecessary inference calls by 40%

ML Career & Job Engine (LLM + RAG)

huggingface.co/justKevv/resume-api

- Developed an end-to-end AI system combining Random Forest and LLMs for career prediction and CV analysis
- Built full-stack app (Next.js + FastAPI) with real-time AI inference and API integration
- Integrated LLM (Qwen / OpenRouter) for skill extraction and personalized CV feedback

Smart Plant — AI + IoT System

github.com/Ngulik-Boys-UNI142/Stage-3_Assignment-1

- Built an AI-enabled IoT system using ESP32 for automated plant monitoring and care
- Developed an image-based disease detection model (90% accuracy) for early plant disease identification
- Integrated Telegram bot for real-time alerts on moisture, pH, and detected diseases
- Used MongoDB for sensor data storage and Cloudinary for image handling

NextStep — AI Career Platform

github.com/justKevv/Student-Recommendation-System

- Developed a full-stack AI platform using Laravel, FastAPI, and TailwindCSS
- Built an ML-powered recommendation system improving internship matching accuracy by 30%

- Designed a modular API architecture for scalable AI feature integration

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript, Go
- **AI/ML:** LLMs, Prompt Engineering, RAG, Embeddings, YOLO, LSTM, Random Forest
- **Frameworks:** FastAPI, Next.js, Laravel, Streamlit
- **Tools:** Git, Docker, Supabase, MongoDB, REST APIs, OpenAI API, HuggingFace, OpenRouter
- **Other:** Agile (Scrum), Linear

EDUCATION

State Polytechnic of Malang <i>Bachelor of Technology, Informatics Engineering</i>	Malang, Indonesia <i>Jul 2023 — Jul 2027</i>
Shenyang Aerospace University <i>Double Degree Program (via polytechnic partnership), Computer Science and Technology</i>	Shenyang, China <i>Jan 2025 — Jul 2027</i>
Telkom Vocational High School <i>High School Diploma, Software Engineering</i>	Malang, Indonesia <i>Jul 2020 — Jun 2023</i>
